University of Colorado Mentor Collective

Dylan Cozad joined the MJ team as director of analytics in our Risk Management + Commercial Insurance department. Dylan leads the data integration and standardization efforts for a wide range of datasets, as well as the creation and delivery of insightful reports for MJ's Risk Management and Commercial Insurance clients, utilizing MJ's proprietary analytics platform, APERTURE®.

Prior to MJ, Dylan gained professional experience for nearly a decade in the insurance industry. Dylan leads the analytics team in developing best practices for managing and analyzing loss, exposure, and policy data. Their work provides a comprehensive view of historical trends, forecasts future developments, and recommends solutions tailored to meet the risk management needs of MJ's clients. Dylan's data-driven mindset and forward thinking approach make him an invaluable asset to both MJ and our clients.

Outside of the office, Dylan likes to stay active. Taking advantage of his proximity to the Rocky Mountains, Dylan loves to ski, hike, and spend time outdoors. With a passion for travel, Dylan hopes to one day visit all of the national parks in the United States.
